

230
Har

The one Stack Chair that successfully combines design aesthetics in the modern mode with a degree of seating comfort unapproached even by many more costly side chairs — and still is as kind — or kinder — to the budget than any alternate choice.

STACK CHAIRS

by **HARTER**

a complement of 500 compliments the decor

of **FRENCH LICK-SHERATON HOTEL**

Dressed for dinner — or for a conference or congress — Convention Hall in beautifully restored Sheraton French Lick Springs (Indiana) wears the modern shimmer of Lustergold and Old Ivory in chic new Harter Series Six-Seventy-One stacking chairs.

Handsome side chairs they may *seem* — but stacked to vacate Convention Hall's full floor area, they require less space than the average office.

O. R. Connolly, general manager (center), Charles Bennett, resident manager (left) and Harry Chapman, catering manager, show one stacking arrangement. These chairs are one of the handsome innovations in the full restoration of the famous Southern Indiana spa and playground — and especially gracious convention site.

... and they're a pretty compliment to anybody's good judgment for hours-long comfort—and the budget.

Sheer, crisp lines in the silhouette of modern architectural design.

- 1 Tailored matching upholstery in both seat and back — in any Harter fabric or plastic coated fabric — any Harter color. (See page 4.)
- 2 Full 2¼ inches of seating comfort. 1½" of molded foam rubber plus an inner ¾" cushion of resilient organic fiber, fully contained in a die-formed one-piece .035 gauge steel pan. Foam rubber lips cover entire depth of front and sides of pan for luxury bulk—to please the guest and protect adjacent furniture.
- 3 Back is two die-formed, contoured .035 gauge steel pans, front and rear—with generous ½" resilient fiber pad. Model 670 rear pan enamel finished to match legs and frame — Model 671 upholstered front and rear.
- 4 Legs of sturdy tapered steel tubing slim away to favor fashion's latest "light look". Lithe-some — and bridge-strong. Special multi-coat, double-baked, phosphate-hardened finish takes the scuffs and knocks and stays a-shimmer.
- 5 Nylon bumper eliminates metal to metal contact.
- 6 Clean, smooth, flush seat pan protects next seat pad and upholstery in stacking.
- 7 Stacks to 8-high with no extra over-lift to clear projecting side frames as in some designs.
- 8 Large 1½" hardened steel glides are chrome plated to be kind to floors — full swivel ferrule design with special interlock. They're floor-flat regardless of chair tilt.

this is **HARTER COMFORT**
full depth seat

It's all resilient padding from upholstery to full depth pan.

not like this **FALSIE**
concealed shallow seat

Inverted dish, skirt covered, allows only half the padding.

or this **BYOP**
(bring your own pad)

Contour alone in a solid material won't fill the comfort bill.

COLORS

Select a rich ensemble — or a color riot — from Harter's unmatched variety of upholstery and metal combinations. As you like it — at no price penalty.

ANY COMBINATION OF UPHOLSTERY MATERIAL—IN DEEP TONES
OR PASTELS—PLUS FOUR COLOR CHOICES FOR METAL

... or these Powder Pastels

Only Harter presents such a fine-furniture choice of fabrics and plastics in upholstery — in so wide a selection of colors — plus a four-way accent gleam in ever-shimmer metal finish. . . . And there's no price penalty in any combination — including the application of your own selected and supplied material.

Series Six-Seventy (and 671) is executed in the full quality tradition of Harter *seating*. There is a difference between seating and just chairs — but there is no accountable difference in your investment. The price of a local 'phone call — or a postage stamp — can bring you the pleasantest surprise of your buying career.

PRESENTED BY
